

# Moderna's Final Vaccine? Black Goo & The Mark Of The Beast | Spirit | Before It's News

*Lee Austin*

By Lee Austin

Moderna's website discloses the mRNA vaccine is more of an operating system than a vaccine. "Recognizing the broad potential of mRNA science, we set out to create an mRNA technology platform that functions very much like an operating system on a computer. It is designed so that it can plug and play interchangeably with different programs. In our case, the "program" or "app" is our mRNA drug – the unique mRNA sequence that codes for a protein."

The COVID-19 non-vaccine is Not the mark of the beast. Obviously, the false prophet and anti-christ haven't arrived on the world stage, and only the false prophet can mandate it. However, the current Moderna operating system contains all of the technology necessary to deliver the mark. For now, it comes down to a question of timing.

Could Black Goo Programmable Matter be the final mRNA code to be uploaded into man?

Black Goo Programmable Matter is an intelligent, self-aware, self-organizing liquid crystal. It is a magnetic substance emitting, receiving, and corrupting the RF spectrum within the universal 5G network. In the esoteric occultic religion Black Goo is considered the elusive philosopher's stone and tangible storehouse for demons.

In scientific terms, imagine self assembling nanobots infused with Black Goo and fashioned into a bio-metric chip, uploaded into the beast, quantum computer. Also known as The Mark of the Beast.

Black Goo defies the laws of physics in our physical world. It can stretch to thirty five times it's girth; Build pliable circuits onto human skin; Embed itself into the body; Function as a bio-sensor that would mold itself to the human body; If broken the pieces can easily stick together again; Placed on the forehead Black Goo can read and translate facial expressions; When stretched over the throat Black Goo turns speech into electrical signals. In the future it could provide the foundation for soft bodied robots.

Black Goo has been featured in many movies such as Lucy, Stranger Things, Spider-Man 3, Alien Covenant, Prometheus, A Haunting In Connecticut, Ares, The Matrix and The Silver Surfer. Predictive Programming has been announcing the advent of Black Goo for the last thirty years.

I believe the Black Goo Programmable Microchip will contain the triple helix DNA genome code of Lucifer, Nimrod, and Apollo. The Book of Daniel prophesied five separate ages, representing gold, silver, bronze, iron/clay and stone. Humans living in this present fourth age of iron/clay will soon be able to access the philosopher's stone and its legendary alchemical substance Black Goo. Mixing the iron of technology, with the clay of an image, creating an eternal Trans-human.

Black Goo Programmable Matter transmutes a human's mortal double helix DNA genome, made in God's image, into a triple helix DNA genome reflecting Lucifer. Once this occurs, the opportunity for salvation is nullified as the human being becomes a hybrid abomination.

In the occultic world, Alchemy is the science and black magic art of unifying matter and spirit. On a physical level, the process of burning off lead impurities transforms the matter of lead into gold via the legendary philosopher's stone. Kabbalists believe Jacob's Ladder to be a powerful alchemical vision, revealing super consciousness as Jacob laid his head upon the stone. This is the genesis of the philosopher's stone. Alchemy also functions spiritually as an occultic, mystical agent of Black Goo Programmable Matter.

So, the Black Goo Programmable matter would be stored in the nanobots and delivered into the human cell by another material called a hydrogel, which is a mix of water and a polymer. The electrical impulse which activates the Black Goo is the 5G network. It will propel the nanobots and Black Goo contained within the hydrogel to penetrate the human cell. It is at this point where the process of synthetic RNA replication begins.

The nucleus is contained within the human cell. With the mRNA vaccine the RNA will be delivered to the cell via hydrogel. Contained within the hydrogel are the micro nano size magnetic particles which contain the Black Goo Programmable Matter. This platform will in turn respond to magnetism, and a 5G magnetic signal, propelling the hydrogel, that carries the RNA. Thus providing the propulsion necessary to penetrate the cell membrane and move thru the cytoplasm liquid contained within the cell. The RNA contained within the hydrogel will then pierce the nucleus and begin to naturally replicate itself in a twisted strand of double helix DNA. But a DNA that is coated artificially. An RNA creation and rearrangement of nucleotides. Producing a DNA artificial sequence. All though the sequence is artificial, the coding is permanent.
